General description of the activities

The Centre of Applied Research works with laboratory and field testing, modelling and monitoring of shallow geothermal installations. Foundation pile heat exchangers are being studied in an ongoing PhD project.

Overview of facilities

Laboratory testing facilities

- Thermal needle probe equipment (Hukseflux)
- Transient plane source equipment (Hot Disk)

Field testing facilities

- TRT equipment (heating)
UBeG, Germany
9kW heating
- 6 borehole heat exchangers (4 x 100 m + 2 x 30 m) at VIA Energy Park
- 1 building piled on 200 energy piles where the GSHP system is monitored (Rosborg Gymnasium, DK)

Computational capacities

- COMSOL Multiphysics
- FEFLOW

Key projects
